

Eclipse Instructions For MacOS

1. Make sure you have added JavaFX (jars) to your Eclipse User libraries, under preferences

2. Make sure under the project you have included the JavaFX you have added above. Also, make sure the JRE system library is up to date! Anything under Java SE 19.0.2 may cause an error! If yours is not 19.0.2, first install the newest Java JDK, then in eclipse, click on: Add Library -> Installed JRE's -> Add -> MacOS VM -> JRE location (Mac): Library/Java/JavaVirtualMachines/jdk-19.jdk/Contents/Home

3. Set Runtime configurations and VM arguments
